**Opinion of the Habilitation thesis of RNDr. Ing. Libor Staněk, Ph.D.:
„Využití molekulární diagnostiky z histologických preparátů a její
aplikace v onkologii a chirurgických oborech”**

This is the quick opinion of the over mentioned habilitation thesis. I am considering only the scientific aspects related to the study and also to the candidate. So, the thesis shows the publication activity of the candidate which at a superficial look can appear impressive. However, when it is checked on SCOPUS database it is possible to see that the candidate has h-index 5 and only 75 citations for 20 documents.

Moreover, the thesis described several molecular assays to detect different types of cancers, but it is confusing and no focused on. There are many things, but without a clear and logical connection among them.

Due to the serious shortcomings of the submitted habilitation thesis, I do not recommend, in accordance with the current legislation, that the candidate (RNDr. Ing. Libor Staněk, Ph.D.) will be awarded with the scientific-pedagogical title Docent in the field of molecular biology.

Bratislava 31.01.2023

Dr. Domenico Pangallo, DrSc.
