Letter of recommendation

To whom it may concern

I am pleased to offer my strong support for Assoc. Prof. Daniel Mihálik application for appointment for inauguration as full Professor of Molecular Biology to the Department of Biotechnology, Univerzita sv. Cyrila a Metoda v Trnave, Trnava. Currently Dr. Mihálik works as an Associate Professor of Molecular Biology at the Department of Biotechnology, Univerzita sv. Cyrila a Metoda v Trnave.

He worked in my laboratory under my supervision from 2001-2004. During this period of acquaintance, he proved to be a sincere, hardworking, intelligent, and able student. His work involved application of molecular biology techniques in medical research. Further down the timeline, he expanded and applied his expertise in molecular biology techniques to the field of plant molecular biology, plant biotechnology and plant virology. He has successfully completed a three-year tenure as Assoc. Prof. of Molecular Biology and has guided 11 national and international projects as a principal investigator. He is a part of an additional 27 research projects and has published over 35 scientific papers. He has been an active and successful participant in the University teaching program and has guided 13 Doctoral students.

I believe that Dr. Daniel Mihálik's scientific and leadership qualities are outstanding. I recommend Assoc. Prof. Daniel Mihálik for appointment as Professor of Molecular Biology to the Department of Biotechnology at the Univerzita sv. Cyrila a Metoda v Trnave without any reservations. I am sure that he will continue making significant contributions to our field.

Best personal regards,

Liliana Schaefer, M.D.
